

DOWNLOAD LIBRESPRITE  
(PIXELART SOFTWARE)

<https://libresprite.github.io/#/!/downloads>

LibreSprite

LibreSprite is a free and open source program for creating and animating your sprites.

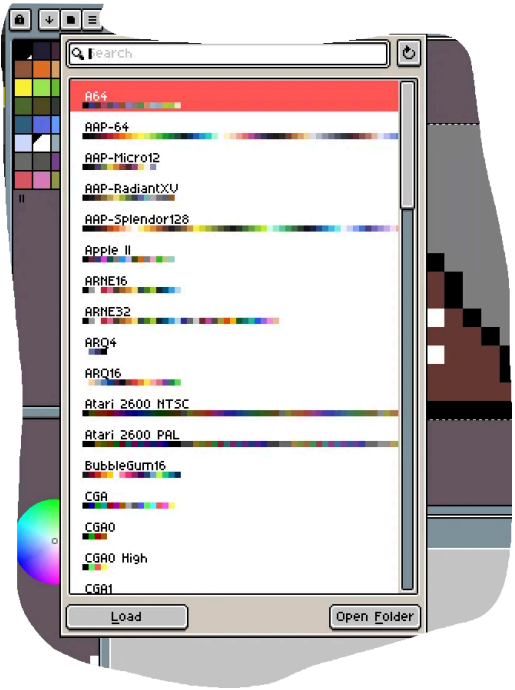

Aseprite is a really good software but to be honest you do not need it for these assets, If you feel like you enjoy libresprite i would definetly reccommend buying aseprite on steam though.

USEFUL TOOLS/SHORTCUTS

Symmetry Tool is the most common tool i use,  
  
the amount of symmetry is up to your style and needs.

Assigning colours to the pallete is useful for replication etc,  
  
click the red " ! " to save the colour to the pallete.  
  
I also highlight all the colours in the pallete and delete the pre existing ones to get rid of clutter.  
  
There are pre-made palletes in the menu below which are quite useful

ASSET NEEDED LIST

THESE ARE NOT FOR ANIMATION. JUST A SINGLE SPRITE FOR THE START.

NAME - ITEM TYPE, BEHAVIOUS/VIBE

KEY - PICKUP

WOOD - PICKUP

SEWER SLIME - BASIC ENEMY, Introduction to enemys, simple

CHUBBY RAT- BASIC ENEMY, Pathetic enemy just sits there and takes it like a chubby rat

FAT OLD "STU" - FREINDLY NPC, Sensei found in sewer who is mysterious and shady.

"STU" CHILD - FRIENDLY NPC, Child of stu

FILE SPECIFICATIONS

Common file dimensions:  
  
16x16 - Small Assets (Pickups/Particles)  
  
32x32 - Also for small - mid range assets

For backgrounds i think 128x128 will be suitable but 256x256 might be better your pick if doign BackGS

SENDING COMMISSION  
FORMATION

WHEN SENDING ME THE ASSETS YOU MAKE

asset-name .ase  
asset-name .png  
scaled-asset .png (Export As -> Resize 200% etc.)

ASSET NAME:

"poo..."

RESOLUTION:

"16x16..."

NOTES (if you have any):

"I think it should be 2 seperate sprites instead of 1", "i have a tummy ache"
